

Bring your glass to life. From crystal clear diamonds to rainy cyberpunk windows, create AAA glass surfaces in seconds.

Turn any mesh into a stunning glass surface with the most complete, feature-rich glass shader for URP. Whether you need realistic architectural glazing, stylized magic crystals, or grime-covered dungeon bottles, **Pro Glass Shader** handles it all with a single, optimized uber-shader.

Realistic and stylized glass has always been frustrating to achieve in real-time... until now.

- Includes a powerful **custom Editor with Smart Inspector**, Presets, in-Scene tools, and dynamic UI filtering to instantly focus only on active features.
- Includes a powerful **Preset System** to drastically speed up your workflow and maintain visual consistency across your project. **20 Presets already included**
- Full comprehensive PDF manual + online interactive guide available here: [\[DOCUMENTATION\]](#)

THE FEATURE LIST

Advanced Weathering & Nature

- **Procedural Rain:** Animated rain droplets without needing complex textures.
- **Dripping Animation:** Realistic trails and gravity-based dripping effects.
- **Triplanar Rain:** Rain wraps perfectly around spheres and complex meshes (no UVs needed).
- **Dynamic Wetness:** Sliders to control surface wetness and smoothness.
- **Dirt & Grime:** Procedural dirt accumulation.
- **Moss Growth:** Directional moss (grows from bottom-up or top-down).
- **Dust Overlay:** Accumulates dust on top-facing surfaces automatically.
- **Frost & Fog:** Interior fog density for icy/cold looks.

Interactive Surface Imperfections

- **Fingerprint Placer Tool: [Exclusive]** Click on your mesh in Scene View to place smudges exactly where you want.
- **4-Layer Smudges:** Mix up to 4 different types of fingerprints or dirt spots.
- **Local Space Tracking:** Smudges stick to the object even when it moves/rotates.
- **Micro-Scratches:** Detail normal map support for surface wear.
- **Procedural Surface Noise:** Adds organic imperfection to the glass smoothness.
- **Triplanar Detail Maps:** Scratches that don't stretch.

Optical Physics & Refraction

- **Physical Refraction:** Snell's Law implementation for realistic bending.
- **Chromatic Aberration:** RGB splitting/Dispersion at edges (Prism effect).
- **Beer-Lambert Absorption:** Accurate volume color (thicker parts are darker).

- **Variable IOR:** Control the Index of Refraction (Air, Water, Diamond, etc.).
- **Frosted Glass Blur:** High-quality blur with 4 adjustable quality levels.
- **Depth Fade:** Soft intersections with other geometry (no harsh clipping).
- **Double-Sided Rendering:** Proper handling of back-faces.

✨ Lighting & Special Effects

- **Total Internal Reflection (TIR):** Realistic reflection at grazing angles (diamond look).
- **Iridescence:** Thin-film interference (Rainbow/Oil slick effect).
- **Caustics:** Animated light projection patterns (Procedural or Texture).
- **Inner Glow:** Sci-fi emissive volume effect.
- **Rim Lighting:** Highlight edges for better visibility in dark scenes.
- **Translucency:** Simulated subsurface light scattering.
- **Edge Darkening:** Simulates the look of thick glass panes.
- **Sparkles:** View-dependent glitter effect (great for snow/magic).

💥 Distortion & Stylized FX

- **Procedural Cracks:** Voronoi-based cracking system.
- **Shatter Effect:** Refraction offsets based on crack masks.
- **Magnify:** Zoom lens effect.
- **Barrel/Fisheye:** Lens distortion effect.
- **Shockwave/Ripple:** Animated circular distortion.
- **Swirl:** Vortex distortion effect.
- **Heat Haze:** Animated hot air turbulence.
- **Pixelate:** Retro/Mosaic glass effect.

🔧 Workflow & Tools

- **Preset System:** Save/Load entire material settings to a file.
- **Thumbnail Browser:** Visual preset selector included.
- **Searchable Inspector:** Find any property instantly by typing its name.
- **Copy/Paste Sections:** Copy just the "Rain" settings to another material.
- **Smart Foldouts:** Organized UI that remembers your preferences.
- **Auto-Keywords:** Automatically enables/disables shader keywords to save performance.

🚀 Performance & Compatibility

- **Feature Stripping:** Only compiles the code you use (0 cost for unused features).
- **Mobile Mode:** "Fast" quality tier specifically for mobile devices.
- **VR Ready:** Supports Single Pass Instanced (SPI) rendering.
- **URP Native:** Built specifically for the Universal Render Pipeline.
- **Unity 6 Ready:** Tested on the latest Unity versions (and 2021/2022 LTS).
